

On Thursday, March 16th Mr. Clough from Vermont Natural History Museum visited with students from grades K-4. His topic of discussion for March was weather. Students learned why warm air rises, how clouds form, the names of the most familiar clouds, what an anemometer is, and how it works. We made anemometers and tested them outside. The students enjoyed the presentation, and as always, we are thankful for Mr. Clough for the fun and exciting lesson and activity ☺
